NEW ENIDINE XR SERIES SHOCK ABSORBERS

Versatility and Unprecedented Performance for High-Cycle Applications

With the implementation of specially developed energy absorption technology, Enidine has introduced its new Extended Range (XR) Series of hydraulic shock absorbers. Offering consistent performance exceeding **20 million cycles** in approved applications, the XR Series sets an industry standard for quality and performance, offering even greater opportunities for OEM's and engineers alike, particularly for:

- P.E.T. Container Manufacturers
- Blow Molding Machines
- Injection Molding Machines
- Plastic Bottle Manufacturers
- High-speed, repetitious applications requiring exceptional durability and performance

New XR Series shock absorbers feature a number of enhancements including specially engineered bearing and piston head designs; state-of-the-art fluid; and a newly developed long-life rod seal. The Enidine XR Series combines its engineering enhancements with the corrosion-resistant nickel-plated exterior of our low- to mid-range Platinum Series shock absorbers, resulting in a long-life, aesthetically pleasing product that can survive the high-cycle, plug-and-play industrial environment, with:

- Five times longer operating life than conventional shock absorbers
- Drop-in replacement for any existing models at all P.E.T. mold stations
- Operating temperature range of -20°F to 210°F (-30°C to 100°C)
- Optimal P.E.T. production throughput
- Minimized scheduled maintenance requirements
- Reduced replacement costs
